Joseph Scott Gladstone, Ph.D., MPH
Associate Professor of Management
Management, Information Systems & Entrepreneurship Dept.

To Whom It May Concern:

I am pleased to recommend Selena Cha for opportunities in data analytics, business analysis, and related analytical leadership positions. Selena was my management student at Washington State University's Carson College of Business on the WSU-Everett campus, where she distinguished herself across multiple 400-level management courses.

Selena is an exceptional candidate for any organization seeking an emerging professional who bridges rigorous quantitative capability with practical operational acumen. In my classes, students are expected to think critically and apply academic frameworks directly to complex real-world situations. Selena did this with rare poise. She engaged deeply during class discussions, asked incisive questions, and consistently looked beyond theory to understand how data, leadership, and operational workflows drive organizational performance.

What particularly sets Selena apart is her balance of technical precision and exceptional communication. All of my students are trained to write and communicate according to the principles of William Zinsser's On Writing Well, focusing on clarity, economy, and directness. Selena mastered these principles during our regular office hours while reviewing and refining her project analyses. She understands that complex analytics deliver little value unless stakeholders can interpret and act upon them. Her ability to translate technical insights into concise, executive-level narratives makes her extraordinarily effective at the intersection of business operations and data science.

Beyond academic performance, Selena demonstrated natural leadership and interpersonal strength. She frequently took charge in team initiatives, delegating tasks effectively, fostering collaboration, and using data to substantiate decisions. Having observed her professional growth—from her undergraduate studies through her master's program in data analytics—it is evident that she does not treat coursework as an isolated academic exercise. She internalizes what she learns and immediately applies it to streamline operations, resolve root causes, and improve reporting integrity in real-world environments.

Selena is targeting roles where she can leverage her blend of operational management, financial oversight, and advanced data modeling to drive measurable process improvements. Based on my close observation of her work ethic, intellectual rigor, and interpersonal maturity, she is uniquely prepared to contribute immediately to cross-functional teams and grow into leadership responsibilities.

I am fully confident that Selena will be an asset of enduring value to your organization. She possesses the technical depth, critical thinking, and professional presence essential for high-impact analytics and business operations roles.

Please feel free to contact me if you require any additional information.

Sincerely,

Joseph Scott Gladstone, Ph.D., MPH
